Germany,

For whom it may concern:

HAURATON product for artificial turf "C SPORTFIX ROM used for National Stadium in Malaysia

We have been using HAURATON drainage solutions for several sport projects.

For our latest project, the National Stadium in Malaysia, we have successfully used the composite system SPORTFIX ROM from HAURATON.

The system was very easy to install and saved us time on this project.

We were using the RECYFIX channel with new type composite mesh grating B125 for the following reasons:

- a) The new grating is much stronger than the old galvanized grating. The new one achieves now the load class B125 (the old galvanizing top had only A15).
- b) In our area the humidity and its effect for products is a big issue. With the new composite grating, the system is now fully resistant against corrosion. This is especially important as we are also close to the sea side and the salty air is very aggressive.
- c) Our final customer was also very happy with the surface. The composite mesh grating protects athletes much better against injuries than steel grating.

In general we were very happy using this new product from HAURATON. The installation worked fast and without any troubles. And technically the product has an excellent quality and should last very long.

We will use this product again on our next projects with artificial turf.

Thank you.

Yours sincerely,

AFN Sports Sdn. Bhd.
